Preface

Hi there!

I hope you are doing good.

I've created this guide to help you during initial stage of setting up Scrum for your team. You can refer this to know the different layout of Sprint Board that you can consider to use in your project. Each layout comes with a different set of details that you can customise as per your need.

Scrum is the most popular development framework that have been increasingly adopted in any development team. This downloadable resource is part of the '*Getting Started with Scrum*' course, which helps you to get started with Scrum using a step-by-step approach.

Sprint Board Type 5: Story with Sub Tasks	6

Overview of Sprint Board Types

- This guide is provided for easier reference to know the different ways you can structure the Sprint Board.
- There is no hard and fast rule about which one you should pick. It really boils down to the individual project requirements.
- The bare minimum is to have 3 columns - ToDo, Doing, Done.
- You can also structure your own Sprint Board.

Sprint Board Type 1: Basic

- A simple layout with the most basic columns that are also mandatory for a Sprint Board.

ToDo	Doing	Done

Sprint Board Type 2: Basic with Story

- A simple layout with the most basic columns for stories having sub tasks.
- Each story has 1 or more tasks that needs to be completed.
- Most of the Enterprise Sprint Boards are of this type.

Story	ToDo	Doing	Done

Sprint Board Type 3: Basic with Testing

- A simple layout with required columns along with a column for testing progress.
- Useful when you want to give importance to test the story with acceptance tests or test cases.

ToDo	Doing	To Verify	Done

Sprint Board Type 4: Cross Team

- A simple layout with the Done criteria achieved through two steps - developer marks as Resolved and the tester marks it as Closed if all test passes.
- This layout is useful when you are working across the teams who are in same or different location.

ToDo	Doing	Resolved	Closed

Sprint Board Type 5: Story with Sub Tasks

- This layout contains Story along with its sub tasks.
- Also, it includes verification or testing stage that needs to be completed before marking it as Closed.
- This layout gives more control over individual state of the items.

Story	ToDo	Doing	To Verify	Closed
