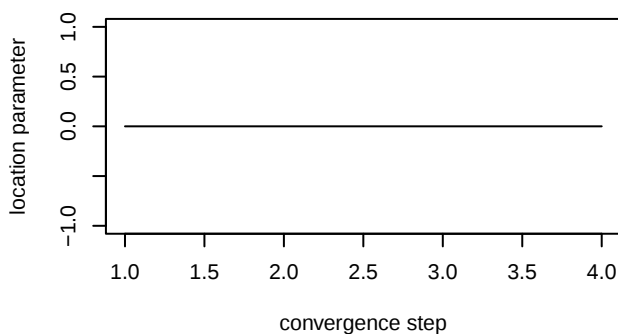

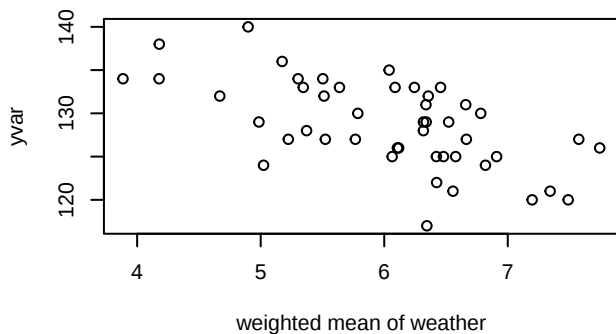

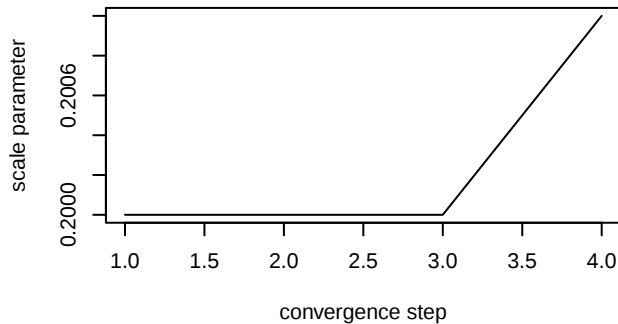

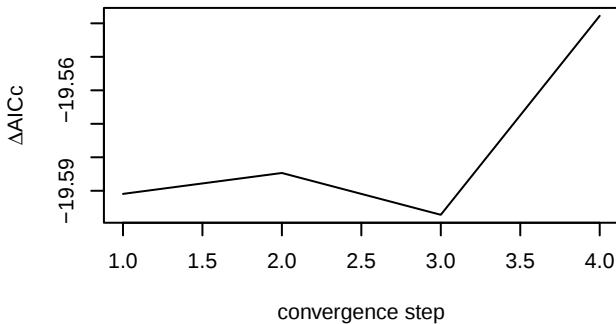

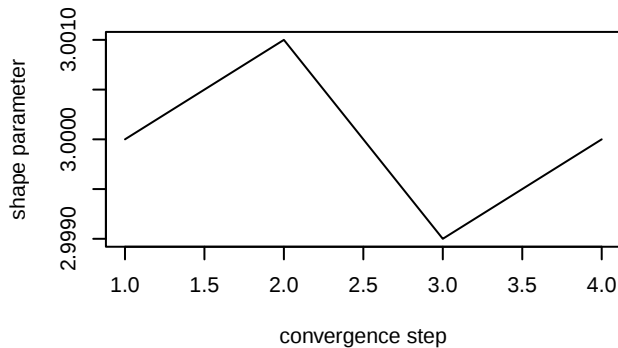

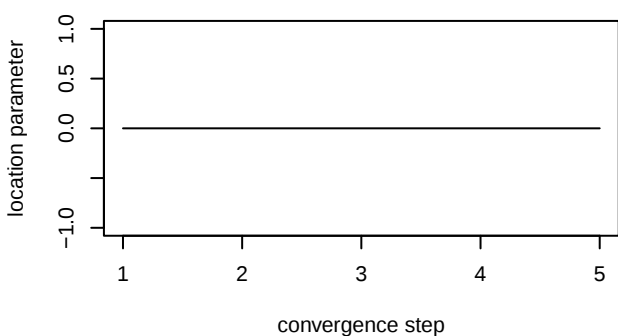

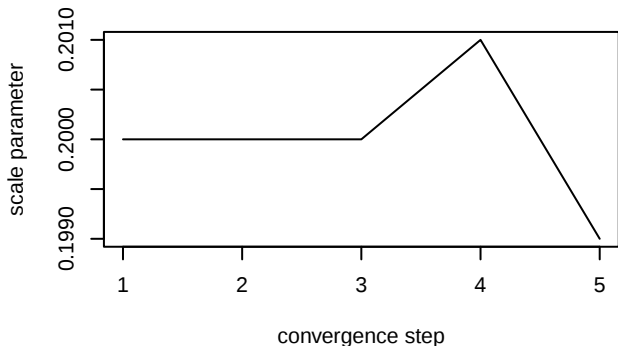

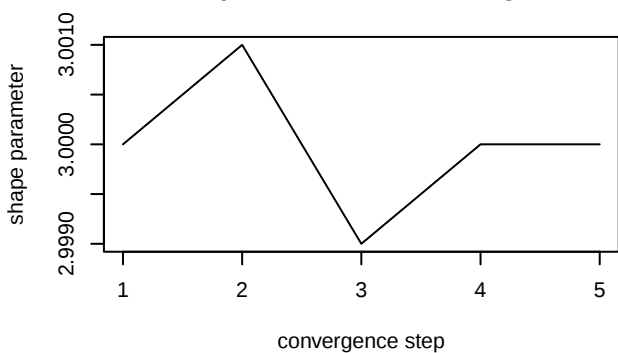

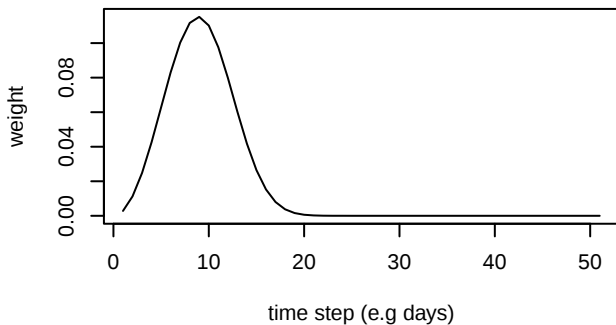

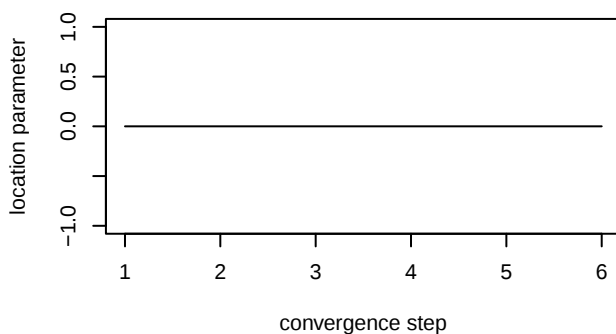

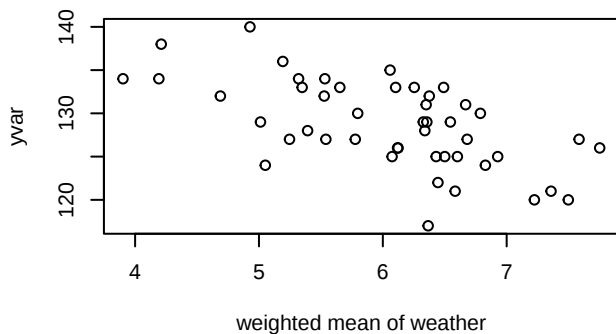

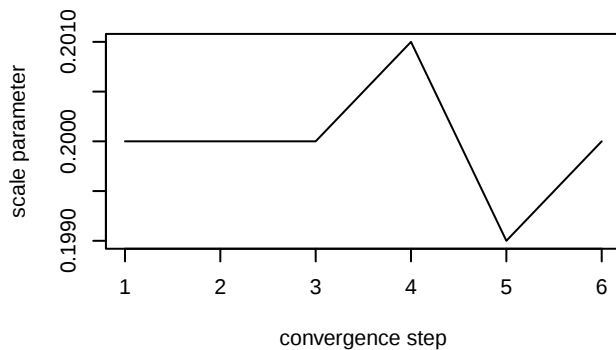

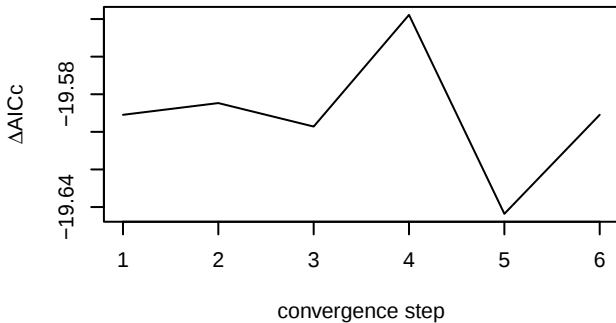

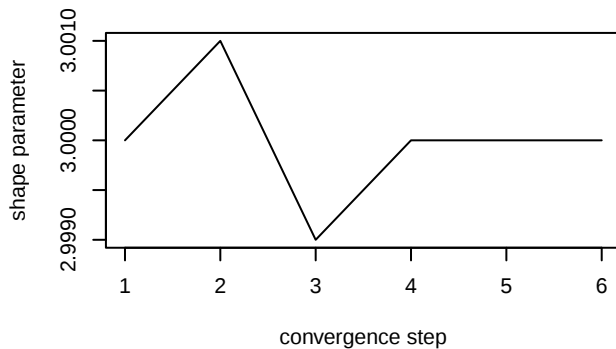

Figure 1 is a line graph showing the time evolution of the normalized density of the infected population. The x-axis is labeled 'time step (e.g days)' and ranges from 0 to 50. The y-axis is labeled 'normalized density' and ranges from 0.00 to 0.12. The curve starts at 0, rises to a peak of approximately 0.11 at time step 10, and then decays back to 0 by time step 20.
